**Six hours to Hack the
FBI**

Law Enforcement Officers need access to intelligence and statistics quickly. CAD reports are powerful tools in your arsenal, especially when assessing and allocating law enforcement resources. It is often the ability to produce documented statistics which clearly defines the need for additional law enforcement personnel or resources.

Net-PD CAD and Records Management software puts that power at your department's fingertips as part of the robust Net-PD solution. [Read more here.](#)

Computerworld - It takes a lot to shock Chris Goggans; he's been a pen (penetration) tester since 1991, getting paid to break into a wide variety of networks. But he says nothing was as egregious as security lapses in both infrastructure design and patch management at a civilian government agency -- holes that let him hack his way through to a major FBI crime database within a mere six hours. Goggans, currently senior security consultant at PatchAdvisor Inc. in Alexandria, Va., says his adventure started when, during a routine network scan, he discovered a series of unpatched vulnerabilities in the civilian government agency's Web server, as well as other parts of the enterprise. Goggans used a hole in the Web server to pull down usernames and passwords that were reused on a host of enterprise systems. In those systems, he found further account details that allowed him to get Windows domain administrator privileges -- a classic escalation-of-privileges attack.

"That software, coupled with a keystroke capture program, would allow an attacker to grab the credentials needed to log into the FBI's National Crime Information Center database," he says.

New! Hyperlinked Quick-Access Reports

- * Scan your department's call log, then just use the mouse to click directly into the Call for Service Report. Net-PD saves you valuable time, yet you're informed of every necessary detail with just one click!

New! Fast upload of your Mugshot Photos

- * Digital Photos now import effortlessly into the Net-PD Arrest report. No need to "resize" your image first like other software. Just browse to your image and double click, it's that easy!

AND and your phone

number:

Did you know your phone number may point the way to a roadmap on the internet of you home's location? For some, this may be undesirable. Try putting your telephone number in Google and complete a search. If your phone number search comes back to your name, a "Map" hyperlink will be displayed, providing a roadmap to the address tied to the phone number. You can remove
